## PREFACE

The information presented in this report was gathered by the Palm Beach County Planning Department for the Florida State Road Department as part of the West Palm Beach Urban Area Transportation Study, and therefore is presented in terms of traffic zones rather than in more common geographical areas such as census divisions or municipal boundaries.

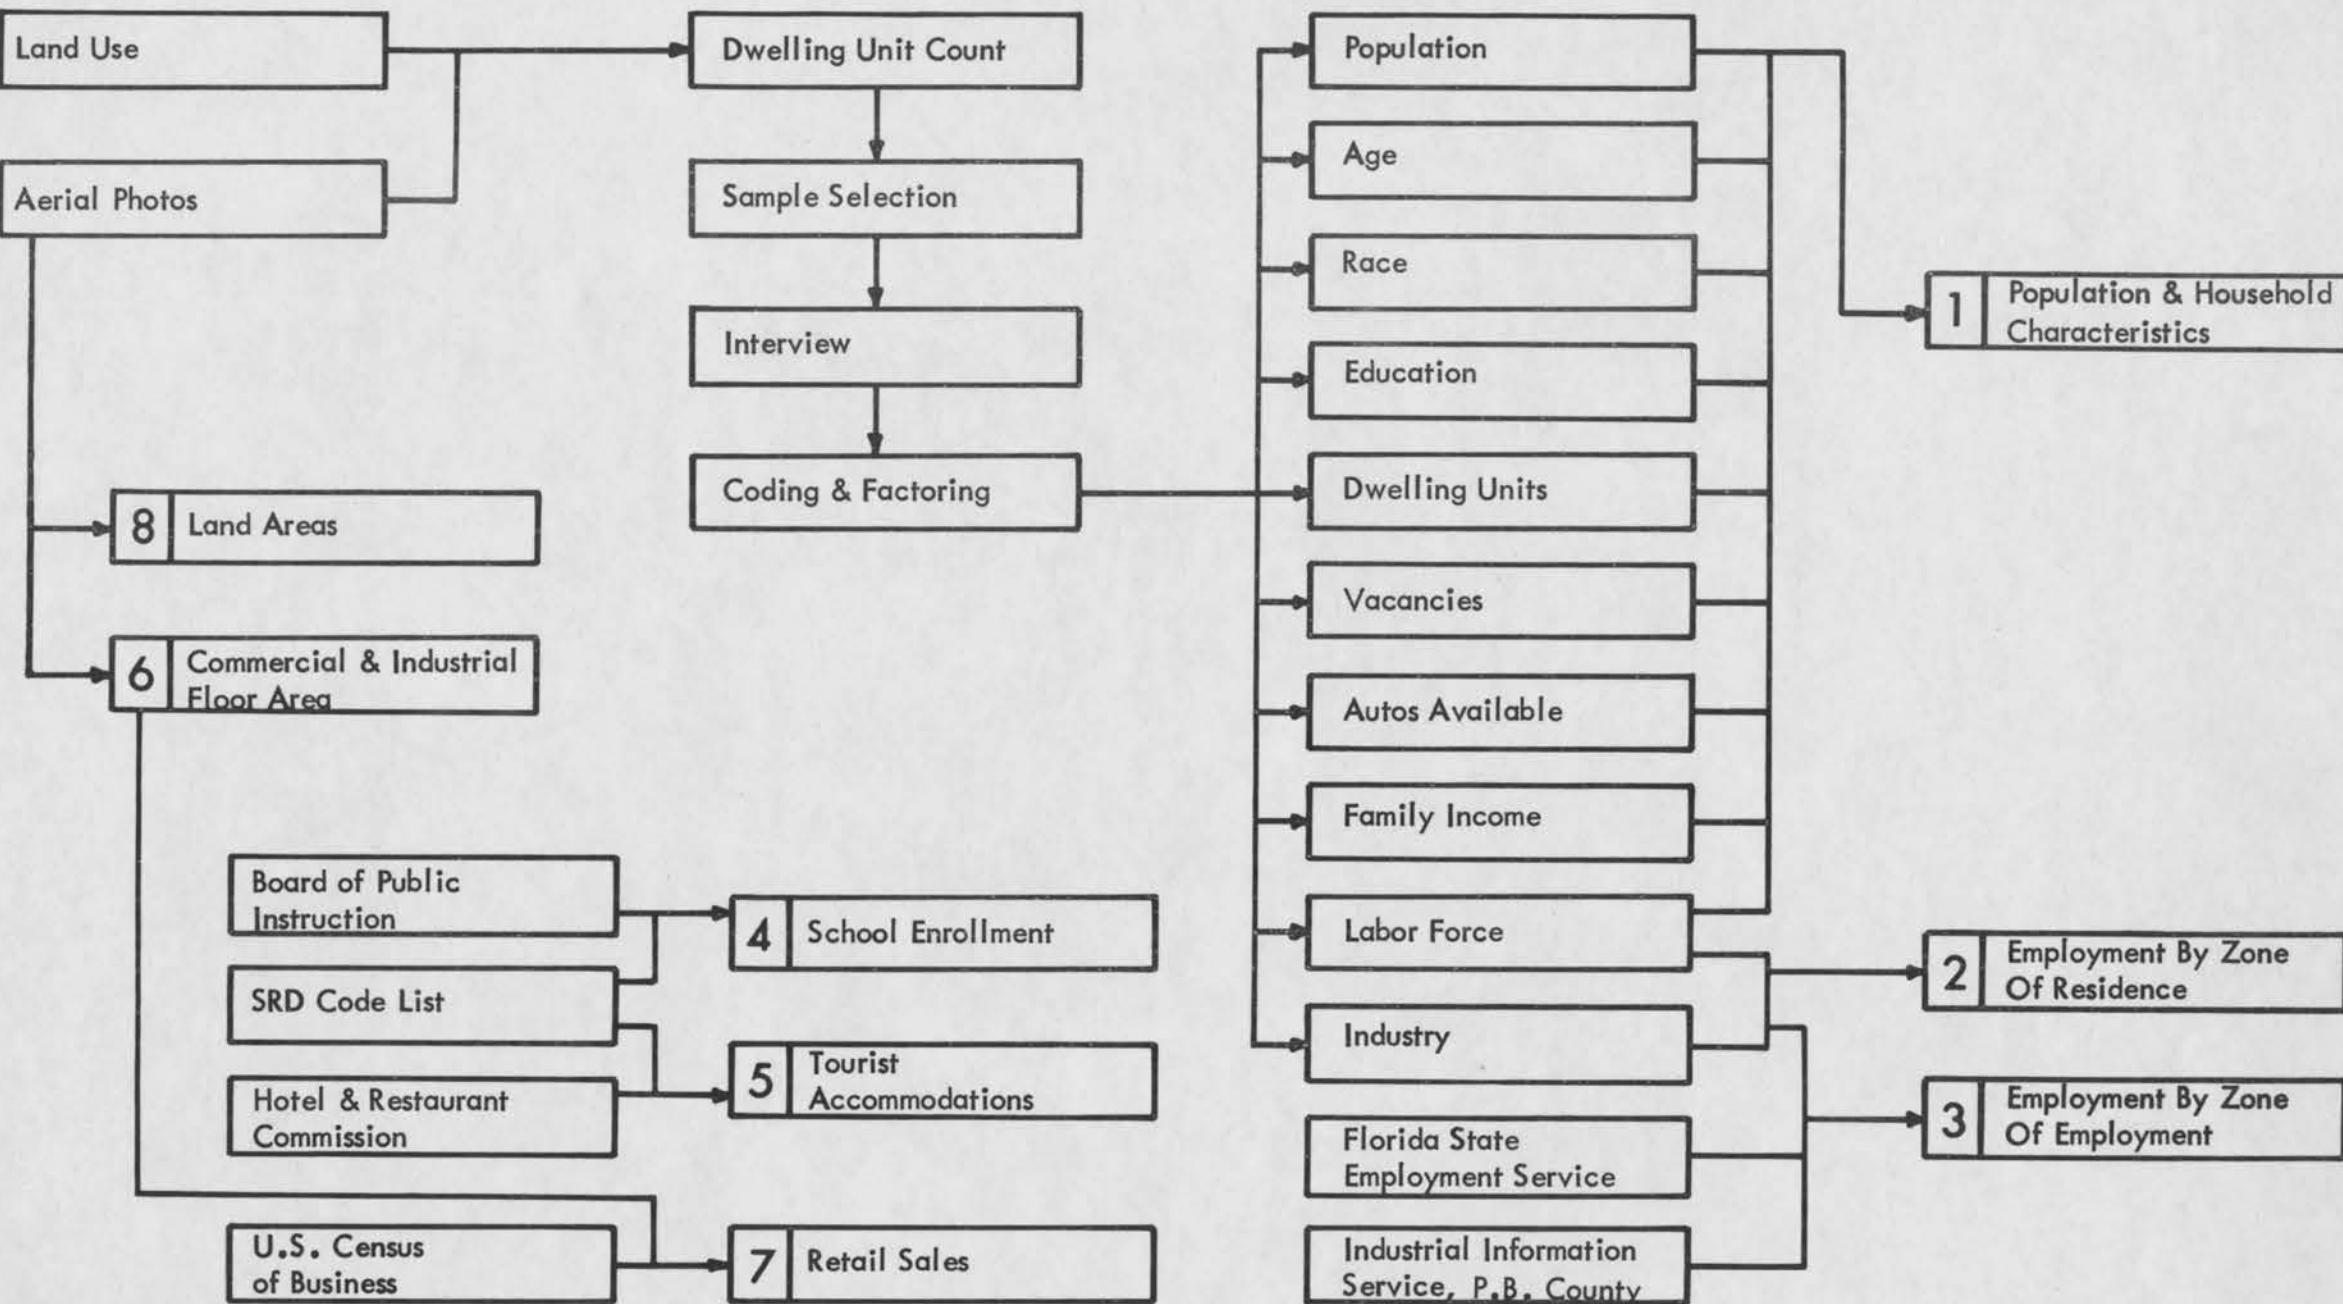

The Home Interview Survey is among the sources of data which are given on the Title Page preceding each Table. The following is a brief explanation of the procedure used in conducting this survey in March-April 1965.

An accurate dwelling unit count was made for each traffic zone from aerial photographs flown in February 1965 and land use information from which a random sample of units was preselected. The sample size varied with the size (in terms of dwelling units) of the zone; the smaller zones were sampled at a higher percentage than the larger zones, but the overall rate was 3.8%. The interviews were made according to the format of the sample interview sheet shown on the left of this page.

Dwelling unit counts, population, and vacancy rates for each zone were verified by comparison with similar data gathered by the State Road Department during the course of their Home Interview Trip Survey, based on a 10% sample, which was conducted in March-April 1965.

Maps of Traffic Zones and Population Density are enclosed in the back of this report.

PALM BEACH COUNTY  
PLANNING DEPARTMENT TRANSPORTATION STUDY  
February 1 - March 15  
1965

## DATA COLLECTION PROCESS

DOCUMENTATION OF DATA SUPPLIED BY THE PALM BEACH COUNTY PLANNING DEPARTMENT FOR THE WEST PALM BEACH URBANIZED AREA TRANSPORTATION STUDY.

I. LAND USE INVENTORY.

- A. A study was undertaken in the Spring of 1964 to determine the availability of existing land use information for the thirty-five municipalities in the study area. The City of West Palm Beach had information one year out of date; the remainder of the area had no existing data. There was no available base map of the study area, nor any correlation between the existing city maps. In light of this situation, the following action was undertaken.
1. Initiated a base mapping program at a scale of 1" = 2000'. The coast and geodetic base was supplemented by aerial photography flown by the Florida State Road Department and the U.S. Department of Agriculture, both taken in February of 1964.
  2. Initiated a contract for aerial photography at a scale of 1" = 200' on cronoflex for specific area treatment and land area measurements.
  3. Collected existing base maps from all sources and commenced a field check of existing land use.
  4. Determination was made at this time to collect narrative type land use rather than coding information in the field. In situations where land use was very dense, a system of block numbering with detail sheets attached indicating use, size, type, etc., were used. This system proved to be most satisfactory in view of the various categories for which we have been requested to furnish information.
  5. A generalized land use plan was prepared from these field sheets at a scale of 1" = 2000' for the establishment of traffic zones.
  6. Completion of the 1" = 200' aerial photography in February 1965 provided a very interesting check and update of land use information gathered in the field with a minimum of additional field work.
  7. Land Area Measurements (Table No. 8 on Flow Chart) were then compiled from the 1" = 200' aerials using planimeters and grid overlays.
  8. The City of West Palm Beach initiated an update and tabulation of their existing data for this office.
- B. The calculations of Commercial and Industrial Floor Area (Table No. 6 on Flow Chart) were accomplished in the following manner.
1. Checks were made of all municipalities to determine if tax records were available in a form to allow the collection of such data. In those tax offices where this approach was possible, this information was used.

2. In the remainder of the study area an independent check of the 1" = 200' photography was made, estimating the floor area with a grid overlay. Here the narrative land use indicating number of floors reduced field checks to a minimum. The independent calculation of commercial and industrial floor area proved to be a valuable check of the land area measurements which had been previously developed.

## II. POPULATION AND ECONOMIC STUDIES.

- A. Population and economic characteristic data was investigated from every possible source. The Palm Beach County study area had not been tracted during the 1960 census, and no independent records were available to allow for the allocation in any area as small as a traffic zone. The determination was made to conduct a Home Interview Survey, and the following procedures were initiated.
  1. The Department of Environmental Research at Florida Atlantic University was contracted to provide services in the development of a questionnaire, sample selection, and including coding, factoring, and tabulation of interview data.
  2. The questionnaire was drawn and determination was made that we might conduct the survey ourselves rather than contracting this service. Personnel were employed, most of which had experience in survey work with the Bureau of the Census or other interview services.
  3. The dwelling unit count from the land use plan was used to select a random sample with overall coverage of between 3 and 4%. Traffic zones with small dwelling unit count were sampled heavy, and fewer interviews were taken in older and more densely occupied zones. The resultant of completed interviews was 3.8% of the study area.
  4. The interview phase of our study was undertaken at the same time as the State Road Department Home Interview Study was underway, making possible significant checks of information.
  5. Coding, factoring, and tabulations were undertaken by Florida Atlantic University. These figures were checked by this Department.

## III. CONSTRUCTION OF TABLES.

- A. The methods used in composing Table 8, Land Areas, and Table 6, Commercial and Industrial Floor Area, have been described in Item 1 above. The following is an explanation of the remaining six tables.

1. Table 1: Population and Household Characteristics.

This Table is composed of the data collected in the Home Interview Survey and the Dwelling Unit Count. Family income, education, and age are medians; auto ownership is the mean number of autos per family.

2. Table 2: Employment by Zone of Residence.

This data was taken from the Home Interview Survey and was checked against data supplied by the Florida State Employment Service.

3. Table 3: Employment by Zone of Employment.

Industrial employment was taken from the Manufacturers Directory, 1965, published by the Palm Beach County Industrial Information Service. Commercial employment was based on the commercial square footage of the zone expressed as a percentage of total commercial square footage for the study area times the total commercial employment as given in Table 2. Other employment consists of agricultural employment based on acres of agricultural land use; domestic employment based on family income; and school employment based on data supplied by the School Board.

4. Table 4: School Enrollment.

This data was supplied by school by the Board of Public Instruction. School addresses were coded to traffic zones with the State Road Department code list.

5. Table 5: Tourist Accommodations.

A list of hotel, motel, and apartment units published by the Florida State Hotel and Restaurant Commission was coded into traffic zones by using the State Road Department code list.

6. Table 7: Retail Sales.

From the 1963 U.S. Census of Business, total retail dollars were determined for the major cities and the remaining area. These figures were multiplied times the percentage of retail floor area in a zone in terms of the square footage of the area. Automobile dealers were excluded from the calculations and were handled in the same manner in a class by themselves.

population and household characteristics

employment by zone of residence

employment by zone of employment

school enrollment

tourist accommodations

commercial and industrial square footage

retail sales

land area

This table, based on the home interview survey, gives 13 of the more significant population and household characteristics for each traffic zone. The Figures are all total whole numbers with the exceptions of age, education, and family income which are medians and autos per dwelling unit which is a mean. Median education was calculated to include only those residents of the zone who were over 5 and not attending school.

**SUMMARY OF POPULATION AND HOUSEHOLD CHARACTERISTICS**

<u>CHARACTERISTIC</u>	<u>NUMBER</u>	<u>PERCENT</u>
Population <sup>1</sup>	276,038	
White	238,060	86%
Non-White	37,978	14%
Male	131,670	48%
Female	144,368	52%
Under 5 Years Old	22,719	8%
5-15 Years	50,659	18%
Over 65 Years	46,117	17%
Median Age <sup>2</sup>	35.8	
In Labor Force	91,568	
Employed	88,546	97%
Unemployed	3,022	3%
Dwelling Units <sup>1</sup>	100,846	
Vacancies <sup>3</sup>	8,852	9%
Occupied Units	91,994	
Single	77,091	84%
Duplex	4,968	5%
Multiple	7,084	8%
Other	2,851	3%
Rent	18,498	20%
Own	73,496	80%
Median Family Income <sup>2</sup>	\$5,384	
Mean No. of Cars <sup>2</sup>	1.26	
Population Per Unit	2.74	
Population Per Occupied Unit	3.00	

<sup>1</sup> Population and Dwelling Units are for the area included in Traffic Zones 1-381. The estimates for the entire County are: Population - 306,578; Dwelling Units - 111,026.

<sup>2</sup> Calculated on Data for Zones 1-350 Only.

<sup>3</sup> Vacancy Rate for Zones 1-350 is 7%.

## population and household characteristics

Data in this table was compiled from information gathered in the home interview survey and is based on SIC divisions as follows:

- COMMERCIAL: Wholesale Trade; Retail Trade; Finance, Insurance, and Real Estate; and Services.  
INDUSTRIAL: Fisheries; Mining; Contract Construction; Manufacturing; Transportation; and Communication.  
OTHER: Agriculture; Forestry; Federal, State, and Local Government; Public Utilities; and Nonclassifiable.

## employment by zone of residence

## employment by zone of employment

## school enrollment

## tourist accommodations

## commercial and industrial square footage

## retail sales

## land area

This table indicates the number of students attending school as of April, 1965, in all traffic zones in which at least one public or private school is located. Kindergartens are excluded from the data unless they offer elementary schooling.

Enrollment figures were obtained from the Palm Beach County Board of Public Instruction and from certain private schools.
