... screen Toshiba
Swedish W:\MR 12

1/866 - 856

330 MHz 6 GB, 4400 4325
which works 50% which loads
2800 which is 1/2 of hard drive.

The unusual 2000 is two big yes

neural apparently

as to hardware; it seems to recognize
connections to the ports — could be
a software problem or problem to
wiring or to docking station.

Pakiko spoke to Toshiba
Toshiba might be willing to take
it back and return it to original
position. Parita identified it!

Machine was hit by wires then
repaired by re-loading windows 2000
They brought it back to work
but not able to work
with its peripheral well

1. Move our 401(k) into bonds
to reduce short-term investment risk.

2. This high in equities today, then in
bonds today in the market.
